

Cello Project Brief

26th June 2023

Key Contact : Jodi Anderson, Business Manager

M: 021 642 294 e: jodi.anderson@cello.co.nz

What is Cello? <https://www.cello.co.nz/>

It's our business to connect yours.

We create secure, high-performing network solutions for New Zealand businesses.

Cello thinks differently, our clients require a network that addresses their unique business requirements and provides a stable underlying platform to support their digital evolution. Cello is a strategic partner you can trust.

We offer Fit for Purpose network solutions and are 100% NZ owned and operated.

How does it work?

Cello is a solution-led network partner. We aggregate the best technologies both locally and internationally to ensure we have the right tools at our disposal. We remain objective in our vendor recommendations and always endeavour to match the technology solution to the business problem at hand.

The Cello 'Core' is the bedrock that underpins the services we deliver. Multi-carrier and geo-diverse, the Core is a virtual super network, built across the infrastructure of New Zealand's major wholesale providers. Configured to ensure maximum speed, capacity and uptime, the Core enables us to deliver modern scalable networks in any shape or size.

Who is Cello?

We have become the Network service provider of choice for many leading New Zealand organisations, providing solutions for over 400 Government, Business and Enterprise clients.

Our capability set includes WAN, LAN, Wi-Fi, Internet, cloud connectivity and security solutions, all provided as fully managed services supported by our 24/7 NOC (Network Operation Centre) and Engineering teams.

Cello has connected over 3500+ sites nationwide, currently having over 25 points of presence in New Zealand and 2 points of presence in Australia.

Cello's headquarters are based in Wellington, with regional offices in Auckland, Christchurch, Dunedin, and supported field Engineering partners nationwide.

Over the last five years, Cello has had the privilege of working and building long term strategic partnerships with multiple network vendors including Cisco, Juniper, Aruba and Fortinet. We also have strong, long-term partnerships, with local wholesale suppliers such as Chorus, Ultrafast Fibre, Spark, Vodafone, Vocus and Feenix.

Here at Cello our method is simple - we have built a team of specialist architects and engineers who are passionate and motivated, and we'll work with you to understand your business requirements, strategy and direction. Then, together, we will come up a network solution that delivers the desired outcomes.

Who is Cello looking for? What is the project?

1. Currently we have a manual process for keeping track of our Engineers certifications and expiry dates and it is difficult to differentiate the 'Cello Approved certs' versus the list of certifications / skills gathered by the Engineers over their careers. This is important from a Training & Development point of view as well as qualifying for rebates from our vendors.

We'd like an automated tool that provides:

- ability to update certs per Engineer, with ability to pull through to a companywide view of all certifications, and drill down to a Cello Approved Certs view.
 - Capability to search / report on expiry dates of certs.
 - Reporting ability to include # of Engineers we have per specific certification.
 - Ability to capture Engineers personal development plan (more than just attaching a document) - templated, with review date pop ups.
-
2. We would like a business wide view of planned works for our clients to enable better resourcing across Teams and visibility to our Sales Team so they can set appropriate timelines with our clients.
 - We would like a SharePoint page to show visibility of scheduled cut overs.
 - Dual view is required as we would need to view both NOC (Network Operations Centre) and Engineering (WAN, LAN & Security) planned schedules.

What is the Technology stack?

MS SharePoint

What's in it for me?

- Supportive, collaborative environment
- Advice and coaching from both technical perspective and business requirements point of view
- Potential employment
- Completion bonus of \$1,000 prezzie cards if key requirements are met
